SCOPE AND FOCUS

Forms, either concrete or abstract, always carry meanings. It is the responsibility of designers to make good use of these meanings, for example, to make products beautiful, to stress the importance of certain values, or to improve a product’s ease of use and to promote or negotiate enriched experiences between people (communities) and people, people and objects and in time between objects (systems of objects) and objects. Design uses its own languages for this purpose, just as poets, painters, journalists, sculptures, film makers and so on do. The topic of this conference is how to explore, study and exploit the combined usage of form, colour and behaviour as a design language. The conference will include presentations, debate and workshop that look for new ways of exploring behaviour, not separately, but in relation to traditional forms.

The vision of ambient intelligence as put forward by Weiser and adopted by ISTAG and many companies and universities, forms the basis of considerable R&D efforts. The central theme is that powerful computation, communication and storage facilities are available, but are invisible. In Marzano’s “La Casa Prossima Futura” the black boxes have disappeared and the living room contains objects and furniture, again. Then if the traditional terminals disappear, what are the mediators between people and this hidden intelligence? How do people control, and get feedback from, these resources in a way that is meaningful and even attractive at a human level?

The conference builds on the assumption that objects will play an important role as mediators. To take full advantage of the richness of human-object interaction and to use the potential of affective (emotional) interactions, there is a need for a new approach. Although many traditional products, even products which do have mechanically moving parts, follow a trend to converge with computing, this convergence comes in the form of electronic displays and buttons being added to traditional forms. As an alternative it is worthwhile to explore adding behavioral expression to the existing movement possibilities. There is a need for new types of processes and tools to support the creation of the envisaged new product types. Product behaviour will be enriched with physical movements. Several possibilities exist: either the product is moving anyhow, or the movements are added just for the sake of communication. In both cases, the designer has considerable freedom to shape the movements and the interactions.

Conversely, developments in computing are not only a source of new challenges, they also offer new options for addressing long-standing problems in product semantics. For example exploiting the insights gained in programming language semantics. New computerised tools may support the systematic exploration of semantics. Also, the developments in information storage and retrieval such as the Internet and the world-wide web offer new opportunities for collecting and unlocking design knowledge relevant to product semantics. This workshop seeks to bring together researchers in the field of design and semantics of forms and movement to exchange results, show demonstrations and discuss the way ahead.

CALL FOR PAPERS & DEMONSTRATOR PROPOSALS: SEPT. 5

ACADEMIC SPONSORS
The academic sponsors of the event include the International Federation of Information Processing, Working Group 16.3 (IFIP WG16.3) and the Design Research Society (DRS). DRS have offered to pay the travel costs and split the fees with the conference organisers for up to three postgrads from outside Newcastle who can demonstrate (by sending the DRS Council a paper -preferably published) that they are doing research relevant to the theme of the event. They must be proposed by a DRS member from their home institution.

WORKSHOP THEMES AND TOPICS
1. Methods and Tools:
   Active forms
   Theatre and choreography
   Sketching in space and time
   Aesthetics and notation of motion
   Editing and scripting of movements

2. Theoretical developments:
   Meaning and perception
   Conditions of applicability
   Ambient versus interactive movement
   Structuring mechanisms and linguistics
   Gestalt theory and compositionality of meaning

3. Practice-based research and case studies:
   Using movement as a mediator
   Appropriation of the everyday
   Effects of context on meanings
   New typologies and ecologies of objects
   Dependencies between form and movement

Keynote Plenary Session Theme:
The Future of Designing with Motion
